

## TPDP 2023 Call for Papers

Differential privacy (DP) is the leading framework for data analysis with rigorous privacy guarantees. In the last 17 years, it has transitioned from the realm of pure theory to large scale, real world deployments. The use of differential privacy by the U.S. Census Bureau and increasing industry adoption has increased its public profile and presents new questions for social scientists and policymakers.

Differential privacy is an inherently interdisciplinary field, drawing researchers from a variety of academic communities including machine learning, statistics, security, theoretical computer science, databases, and law. The combined effort across a broad spectrum of computer science is essential for differential privacy to realize its full potential. To this end, this workshop aims to stimulate discussion among participants about both the state-of-the-art in differential privacy and the future challenges that must be addressed to make differential privacy more practical.

Specific topics of interest for the workshop include (but are not limited to):

- Theory of DP
- DP and security,
- Privacy preserving machine learning,
- DP and statistics,
- DP and data analysis,
- Trade-offs between privacy protection and analytic utility,
- DP and surveys,
- Programming languages for DP,
- relaxations of the DP definition,
- DP vs other privacy notions and methods,
- Experimental studies using DP,
- DP implementations,
- DP and policy making,
- Applications of DP,
- Reconstruction attacks and memorization.

**Submissions:** The goal of TPDP is to stimulate the discussion on the relevance of differentially private data analyses in practice. For this reason, we seek contributions from different research areas of computer science and statistics. Authors are invited to submit a short abstract (4 pages + references maximum) of their work. Submissions are single-blind (non-anonymized), and there is no prescribed style file (though authors should be considerate of reviewers when formatting submissions). Submissions will undergo a lightweight review process and will be judged on originality, relevance, interest and clarity. Submissions should describe novel work or work that has already appeared elsewhere in the last year but that can stimulate the discussion between different communities at the workshop. Accepted abstracts will be presented at the workshop either as a talk or a poster. The workshop will not have formal proceedings and is not intended to preclude later publication at another venue.

**Submission website:** TBD

**Dates**

Submission Deadline: July 7, 2023 (Anywhere on Earth)

Notification: August 11, 2023

Workshop: September 27 and 28, 2023.

Location: Boston University, Boston, Massachusetts, USA
